

# Evaluation of My Learning Experience in the Career Development Activity

After you complete the *This is My Future: 2015* Career Development activity, please think back on the things you learned. Discuss your impression of the activity. Include the things you liked as well as the things you did not like. Explain what parts could be improved. Would you recommend the activity to others who are investigating their options for the first five years after high school.

1. Did the investigation give you more information about the career options available after high school? If so, what information was new to you?
2. Did any of your research make you more/less likely to continue your education beyond high school? If so, what information helped you decide?
3. Some people think that the cost of education beyond high school is the reason they cannot continue their learning. Did your investigation lead you to ways people can get financial assistance for education no matter what their financial situation might be? If so, does this information make a difference in your future plans?
4. Did the investigation about average earnings in various occupations as well as the need for certain types of workers 5 or 10 years from now help you decide whether there will be a job waiting for you when you are ready for it? Did you decide to stay on your planned career path or go in a different direction? Why?
5. Is the thought of making a lot of money in your career more or less important to you than a career where you might make less money but get more satisfaction from the work you do? What if you could have both?
6. What final comments do you have about the Career Development activity?
